GUARANTEE THAT THE CANCER WILL BE CURED.

There are people who are miraculously cured within 1-2 weeks!

Please share this file with all cancer patients you know!

There is a way to treat cancer that is very easy to employ and does not cause the side effects that traditional chemotherapy causes. Many people using this treatment protocol are miraculously cured within only 1-2 weeks! (If you have a slow-growing cancer, your cancer is advanced, or you take a lower dosage, it may take longer).

This method uses two compounds, Quercetin and Vitamin C (in the ascorbic acid form), which are mixed together in a 0.5 L water bottle. While taking this, you could also take Vitamin E, 400 IU a day. Optionally, you can add green tea extract to the mix to make it 100+ times stronger.

INSTRUCTIONS:

- 1 Buy a 0.5L water bottle.
- 2 Buy Quercetin AND Vitamin C (ascorbic acid form) from a vitamin store or the internet:
(press ctrl+left to open a new window)

<https://www.iherb.com/pr/MRM-Nutrition-Quercetin-60-Vegan-Capsules/12059>

<https://www.iherb.com/pr/California-Gold-Nutrition-Gold-C-Vitamin-C-1-000-mg-60-Veggie-Capsules/61864>

or

Go to google.com and type: buy Quercetin + Vitamin C [ENTER]

or

You can find Quercetin + Vitamin C in any vitamin store, depending on your location.

We do not receive any money from this; We are a non-commercial website!

Do not buy modified Quercetin.

- 3 Optionally, you can buy 400 IU of vitamin E and green tea extract from the internet or vitamin stores: (press ctrl+left to open a new window)

<https://www.iherb.com/pr/Sundown-Naturals-Vitamin-E-180-mg-400-IU-100-Softgels/67822>

<https://www.iherb.com/pr/Now-Foods-EGCg-Green-Tea-Extract-400-mg-90-Veg-Capsules/1105>

<http://www.vitacost.com/vitacost-natural-vitamin-e-400-iu-100-liquid-capsules-10>

<http://www.vitacost.com/vitacost-green-tea-extract-standardized>

- 4 You can select the fastest shipping option so to receive your cure faster! This is recommended if you live overseas and have to wait for a long time before receiving the package.

- 5 If you have any questions or remarks, you can send them to treatcancerinfo@gmail.com

- 6 Upon receiving the package, open it and remove your Quercetin + Vitamin C. Open the capsule containing Vitamin C and sprinkle the contents into a 0.5L bottle containing water. Do the same with the capsule containing Quercetin. Open it and sprinkle the contents into the water, ensuring you have 500 mg Quercetin and 500-1500 mg Vitamin C (Ascorbic Acid) in the bottle.
Shake the bottle very well for some time (1 minute).
 You will see a bright yellow liquid.

- 7 The bottle now contains an anti-cancer potion. Now, you can, for example, take one sip (15 mL), wait 5 hours, and then, **if there are no side effects**, retake another sip. Later, you can take a sip after every hour or even every 10-15 minutes-the more the number of sips you take, the faster the results.
Note: It should be noted that you should wait at least 10-15 minutes after every sip before taking the next sip (15 mL) out of the mixture, and taking more than a sip won't make it work better. Why? This will be explained later. Always shake the bottle a bit each time before taking a sip.
 You could also take 400 IU of vitamin E daily during this treatment period. Additionally, drink plenty of water during the cancer treatment to prevent side effects.

- 8 **Repeat mixing when the bottle is empty.**
 The maximum dosage is 3,000 mg of Quercetin and 9000 mg of Vitamin C a day. If, after 1-10 week(s), it is still not working properly, take green tea extract together with the mix. Doing this can make the mix 100+ times stronger. So be careful and start with a low dosage. Because if your cure is too fast, it could lead to a condition called tumor lysis syndrome.

- 9 Now, it's time to share your treatment results with us. Please send your treatment results to treatcancerinfo@gmail.com
Contact us ASAP if you had good results!
 If you have any questions or remarks, please send them as well.

- 10 Now, read the message on page 10. It's about supporting us.

QUESTIONS AND ANSWERS:

What is the maximum dosage?

The maximum recommended dosage is 3000 mg of Quercetin and 9000 mg of Vitamin C a day.

Should I mix the green tea extract in the bottle of Quercetin + Vitamin C or take it as a capsule?

It's better to mix it in the bottle.

Would it be a good idea not to take the free radicals (green tea) and only use the quercetin + vitamin C + vitamin E?

Yes, to be on the safe side, to prevent tumor lysis syndrome, this would be a good idea. However, the results may or will take longer than 1-2 weeks to be felt. The choice is yours. It's a good idea because usually, cancer treatment can take 6 months, so you can take it slowly with this protocol and leave the free radicals.

What if your protocol does not work or does not produce the best results? Or if there are (dangerous) side effects?

Send us an email ASAP, so we can inform other people about this and change the protocol/ information on our website.

Is there anything else I should be aware of?

Yes, We got reports from people who had fantastic results. Still, the tumor marker bounced (temporarily went up falsely) because the cancer cells were dying and spilling their content. Or people who went for a CT scan (without PET) and the results of the scan did not show the correct results because the CT scan couldn't differentiate between dead cancer cells and living. That is why only a PET scan (with or without CT) is accurate!

WARNINGS AND PRECAUTIONS:

DO NOT START WITH GREEN TEA EXTRACT!

Starting with Green Tea Extract in the first week can cause Tumor Lysis Syndrome. Only start when the effects of Quercetin + Vitamin C + Vitamin E are not strong enough after using them for 1-10 weeks.

START LOW, GO SLOW!

Start with a low dosage (1 sip every 5 hours) and slowly increase the dosage (1 sip every hour). Monitor for side effects! If side effects occur, lower the dosage!

DRINK PLENTY OF WATER DURING TREATMENT!

Drink plenty of water during the treatment period to help flush out the toxins released by dying cancer cells. This reduces the risk of Tumor Lysis Syndrome (TLS) and helps minimize detox symptoms.

DETOX SYMPTOMS MAY OCCUR DURING TREATMENT!

Fatigue, Low-grade Fever, Muscle or Joint Aches, Mild Headaches, Temporary Nausea, Rashes / Skin Flushing, Brain Fog or Drowsiness, Swollen Lymph Nodes, Worsening Tumor Sensation, Night Sweats, and Mild Diarrhea or Constipation are detox symptoms that may occur due to toxins from dying cancer cells being eliminated by the body. Contact a doctor immediately when experiencing: Sharp pain that worsens suddenly, Breathing difficulties, Dark urine or no urine output, Persistent vomiting, Swelling that spreads or becomes hot or painful, Confusion or rapid heartbeat.

MONITORING BY ONCOLOGIST IS RECOMMENDED!

An oncologist can monitor for Tumor Lysis Syndrome and take precautions. Additionally, when tumors disappear quickly, they might bleed. Please inform an oncologist so you can be adequately monitored. Please download the Oncology Monitoring Guide from our website and give it to an oncologist.

IMPORTANT! The risk of developing tumor lysis syndrome, bleeding, or detox symptoms is highest when treating a more advanced cancer, such as stage 3 or stage 4 cancer!

THIS THEORY EXPLAINS HOW QUERCETIN/ FLAVONOIDS WORK:

Quercetin is an antioxidant. It neutralizes free radicals. In doing this, Quercetin converts into a radical molecule. For example, it neutralizes two radical molecules and becomes a radical molecule with two radicals.

Then, it sticks to a DNA molecule. Since there is no water present there, it remains as a radical molecule.

When a cell divides, water approaches this radical molecule, causing it to react with water and produce OH radicals, which in turn kill the cell.

Normal cells always repair their entire DNA before cell division, so the radical flavonoid molecule is always removed. So, normal cells remain unharmed.

Cancer cells divide before they have repaired their entire DNA, and as a result, they die.

So it's actually a bomb.

A flavonoid molecule is like a bomb that explodes if it's not removed before a cell tries to divide. Cancer cells that divide before reparation die; this happens because the bomb wasn't removed, so it explodes when the cell attempts to divide. Normal cells that divide after reparation remove the bomb, so they continue to live.

Cancer cells that do completely repair their DNA before cell division aren't cancer cells anymore (they are normal cells) because they have to wait a long time before cell division.

Normal cells that did not completely repair their DNA before cell division can transfer a mutation to their daughter cells.

So flavonoids kill only cancer cells but not normal cells.

It goes like this:

Normal cell -> completely repaired -> flavonoid bomb removed -> cell divides normally.

Cancer cell -> not completely repaired -> flavonoid bomb explodes -> cell dies during division.

Cancer cell that completely repairs = normal cell.

Theoretically, this is a 100% cure for cancer!

The Quercetin is dissolved in Vitamin C (ascorbic acid form) because this protects the Quercetin from being degraded by enzymes. Also, Vitamin C and Quercetin together work like DMSO (it penetrates the body and skin easily) because Quercetin (fat-loving; lipophilic) dissolves in Vitamin C (water-loving; hydrophilic). Therefore, the mix should possess the same properties as DMSO and be able to penetrate the body and skin easily. Vitamin E needs to be added because it's an antioxidant as well and works synergistically with Quercetin + Vitamin C.

Quercetin must be taken slowly because it has a very short half-life, and works by neutralizing free radicals. There are only a limited number of free radicals in the body, so to use these free radicals to kill cancer, you need to dose the Quercetin every 10-15 minutes. If you take a very high dosage of Quercetin, it will be eliminated quickly and will not be able to utilize the free radicals that become available after the first 10-15 minutes.

Be careful if you choose to add free radicals: Because flavonoids work on free radicals, adding free radicals to Quercetin + Vitamin C + Vitamin E can dramatically increase its strength. Free radicals can make the mix 100-10,000 times stronger, according to calculations. Green tea extract could work as a pro-oxidant (it generates free radicals); this is why it is included in this treatment protocol. Please be informed that using green tea extract for an extended period may be bad for liver.

Adding H_2O_2 to the mix may also be effective. Please be informed that pharmaceutical-grade H_2O_2 is not for consumption, but food-grade H_2O_2 is. If you choose to add H_2O_2 or green tea extract to the mix, you should drink the mix quickly because the oxidized Vitamin C has a half-life of only a few minutes. 1 ml of 3% H_2O_2 should be enough to do the trick. Simply add the H_2O_2 to the mixture of Quercetin + Vitamin C dissolved in water and drink it quickly after adding the H_2O_2 . If you have a doctor who wants to work with you, you could also combine this mix with radiation because radiation generates free radicals. Some kinds of chemotherapy are also known for their ability to create free radicals, so combining this treatment protocol with chemotherapy might also make it work much better!

If you are cured of cancer and want to support us, please do so. By supporting us, you can help us treat and help more cancer patients. Send your donation internationally to our bank account. These are our bank account details/ numbers:

Name: Steven Chang
Address: Mezenhof 1 k333
Postal Code: 3082 ZE
City: Rotterdam
Country: Netherlands
BIC code: INGBNL2A

IBAN code: NL22INGB0007389860

Bank address: Name: ING Bank N.V. Attn: Foreign Operations
PO Box: PO Box 1800 Postal code: 1000 BV City: Amsterdam

You can also email us to ask for our bank account details:
treatcancerinfo@gmail.com

Your donation will be spent on advertising and researching this cancer treatment protocol enabling more people to be saved. Advertising is essential because it enables us to inform the public about this treatment protocol, ultimately saving more lives! If we didn't advertise, you wouldn't have seen this treatment protocol, so please support us! If you donate 2000 dollars, we can save approximately 40 people! Donate 5000 dollars to save 100 people! The MORE you give, the MORE we can SAVE! 95% of your donation will be spent on advertising and research, and there is a 5% fee. This 5% fee will be given to the inventor of this treatment protocol (Steven Chang or his company). Remarks: We are not a non-profit organization. This is an alternative treatment (no proof).

This cancer treatment protocol was invented by: dr. Steven Chang
Please thank him for inventing this cancer treatment protocol.
